

# Cybersecurity

## solutions

### Stay vigilant, achieve resilience

Cyberattacks: It's no longer a question of "if." It's a question of "when."

- Every 14 seconds, a business falls victim to ransomware.
- Every 39 seconds, a computer is hacked.
- On average, it takes a business more than 200 days to detect a data breach.

The average cost of a cyberattack for an organization is more than \$1 million.

Wipfli's team of cybersecurity professionals can help ensure your security strategy and solutions are as fluid and agile as the evolving cyber landscape.

We provide a full range of cybersecurity services to help you proactively address mounting threats of effectively respond to in the event of an incident.

# Cybersecurity solutions

Wipfli's comprehensive cybersecurity services protect you today while staying agile to meet evolving threats tomorrow.

## Identify

We'll start by assessing your company's controls and policies while analyzing your overall security weaknesses and helping prioritize improvements.

## Protect

We'll ensure your controls are aligned to protect your business, conduct training and evaluate third-party risk.

## Detect

We will attempt to exploit your systems and policies to expose specific vulnerabilities and work with you to reduce them.

## Respond

We're here with 24/7 support and emergency handling to help investigate an attack or compromise, mitigate exposure and limit damage to your reputation.

## Recover

We can help ensure a timely recover after a cybersecurity event by developing and maintaining your business continuity plans.

## The Wipfli difference

Our team of professionals has profound understanding of cybersecurity threats, along with a comprehensive suite of information security services to help you.

They also have a deep understanding of business operations across a wide range of industries.

That knowledge and unique insight lets us proficiently address the stringent data-protection regulations and best practices that are applicable to your industry.
