

CYBERSECURITY ESSENTIALS

For Nonprofits

CYBERSECURITY JUMP-START ONLY \$3,500!

Don't know where to start? Our cybersecurity jump-start package includes a perimeter vulnerability assessment for up to five active external IP addresses and a cybersecurity rapid assessment.

Taking a proactive approach to security management is every nonprofit organization's obligation.

That includes engaging in several key measures to properly identify and address risks. Many of these measures are the absolute basic minimum requirements that simply cannot be overlooked.

Whether your organization manages your security risk in-house, engages an outside resource, or relies on a combination of inside and outside assistance, these basic security measures must be performed and managed. To help provide assistance and deliver flexibility, Wipfli offers the following packaged services to better meet your security needs.

SERVICE	FREQUENCY	PACKAGE		
		BRONZE	SILVER	GOLD
Perimeter vulnerability assessment	Annual	•	•	•
Cybersecurity rapid assessment	Annual	•	•	•
Internal vulnerability scan	Annual	•	•	•
Perimeter scans	Monthly		•	•
Perimeter configuration review	Annual		•	•
Email phishing test	Annual		•	•
Employee security awareness training	Annual		•	•
NIST cybersecurity assessment	Annual			•
Incident response and handling	Annual			•
Comprehensive vulnerability analysis	Annual			•
Security briefings	Quarterly			•
		STARTING AT \$495 PER MONTH	STARTING AT \$995 PER MONTH	STARTING AT \$1,995 PER MONTH

Wipfli's security experts can help determine the best package for you based on the maturity of your information security program.

Service Descriptions

Perimeter vulnerability assessment

Understanding risks to your network starts with a perimeter vulnerability assessment designed to assess the vulnerability state of your Internet-facing systems from the perspective of an outside attacker. Using state-of-the-art, best-of-breed commercial and open-source tools, we will help find the risks associated with your Internet-exposed systems.

Cybersecurity rapid assessment

Wipfli's security experts will work with you to complete a rapid assessment of your cybersecurity controls. Utilizing custom surveys and interviews, we will get a snapshot of your security posture and provide recommendations to manage risk to acceptable levels.

Internal vulnerability scan

Using an industry-leading networking scanning application, we'll assess the security of your internal network environment to detect known vulnerabilities and identify anomalies such as missing patches, common vulnerabilities and configuration issues, weak passwords, and account and password policies.

Perimeter scans

Wipfli's network scanning solution utilizes a best-of-breed scanner to identify vulnerabilities associated with out-of-date software and misconfigured systems. A great supplement to your annual perimeter vulnerability assessment, these monthly scans can identify common network vulnerabilities of your perimeter systems.

Perimeter configuration review

Harden and secure your essential network devices such as firewalls, switches, and routers. Looking at the actual configuration, Wipfli will access the inner workings of the device and produce a more detailed analysis of its vulnerabilities than through scanning alone.

Email phishing test

You've implemented policies and procedures to safeguard your information and technology assets. Now test your

employees' awareness of and compliance with those policies. Our email phishing tests are designed to entice users into divulging information, accessing systems, executing code, or performing other actions prohibited by your policy.

Employee security awareness training

Your employees are the last line of defense. They need to be trained and situationally aware at all times. Wipfli will make security training available online to all employees to keep security top of mind.

NIST cybersecurity assessment

Provide management visibility into your organization's current state of preparedness. Using the industry-leading framework, we will help you assess your organization's current maturity levels for the five key domains of cybersecurity—Identify, Protect, Detect, Respond, and Recover—and highlight areas for improvement.

Incident response and handling

Wipfli's incident response team is there for you 24/7 to help isolate, contain, and eradicate incidents should they occur. We'll work swiftly to minimize the impact to your organization and provide forensic investigation support if needed. A dedicated email address and phone number are provided to your organization to report incidents.

Comprehensive vulnerability analysis

Wipfli's security experts will conduct a thorough test and analysis of the technical, physical, and administrative controls that protect your organization. Vulnerabilities are prioritized and include actionable recommendations for remediation to make sure you are allocating resources wisely.

Security briefings

Quarterly briefing calls will be conducted to discuss any questions or issues regarding the security initiatives impacting your organization. Your dedicated security professional can answer questions regarding assessment findings, remediation efforts, new regulatory guidance, and new trends and threats in the security landscape.

Wipfli's security professionals have extensive experience in the nonprofit industry, bringing practical solutions and real-world perspective. You'll benefit from:

**SEASONED NETWORK
SECURITY ENGINEERS**

**24/7 ACCESS
TO EXPERTS**

**CUSTOMIZED,
EASY-TO-READ REPORTS**

**ACTIONABLE
RECOMMENDATIONS**

**TESTS TAILORED TO THE
UNIQUE RISK AND CONTROL
ENVIRONMENT OF YOUR
ORGANIZATION**
