

Complete

Solution for

Job Shops

Manufacturing

The ERP for job shops

Job shop manufacturing is a complex business. Producing short-run orders for customized products requires accurate job costing and efficient project management. Traditional manufacturing software is aimed at discrete products and predictable production. But you need the flexibility to make daily production changes and build a wide breadth of products.

Wipfli's job shop solution caters to your high-demand environment with tools for each dimension of your operation, from production and inventory to back-office administration. Our Complete Solution for Job Shops, powered by NetSuite, provides actionable insights to help you win customers and move orders through your plant.

Managing diverse operations

Our Complete Solution for Job Shops is a total business management suite. You can calculate profitability, track resource utilization, plan production and route WIP. Establish realistic targets and uncover opportunities to optimize operations.

Real-time business data, available at your desk and on your mobile device:

- Sales by customer
- Profitability by job
- Profitability by customer
- Estimate to actual profitability
- Labor utilization
- Equipment utilization
- Inventory on hand
- Lead time
- Unit production cost
- Efficiency by work center
- Utilization by work center
- OEE (overall equipment effectiveness)

Wipfli's job shop solution is an integrated, cloud-based enterprise resource planning (ERP) tool that is accessible anytime, anyplace to help you run your business. Build on the NetSuite ERP platform, our job shop solution is ready-to-scale so you can add tools and functionality as your organization grows.

WIPFLI

Pave the way for growth with a scalable, hassle-free ERP

Wipfli's job shop solution is a fully integrated ERP to manage your job shop operations. Get real-time, meaningful job data on production, estimating, materials, scheduling and more.

Production control

Get a clear view of what's happening on the shop floor and streamline production environments. Track production by operation, monitor shop floor performance and automatically update completion quantities and times.

Plan jobs quickly and efficiently. Our solution lets you auto-generate prioritized task lists by employee or production line. Track clear pick lists and instructions for each work order. Routing and scheduling tools allow you to detail the steps of a manufacturing process and define scheduling parameters. Wipfli's job shop solution automatically adjusts the start and end times of operations based on previous projects, providing a more accurate schedule.

Bill of materials

Wipfli's job shop solution saves you time by defining the inventory components required for a single assembly, plus those required for a particular work order, and putting assembly instructions into BOMs that are then packaged with assemblies and work orders.

Fulfilling work orders reduces inventory counts and logs costs in general ledger accounts, allowing you to track what components you're using and how much you're spending.

Inventory control

Get accurate component tracking that supports reorder points at your preferred stock levels. You can set automatic reorder points of assemblies and finished goods based on lead time, demand (historical and seasonal) and supply-to-stock timelines.

Quoting and costing

Get a 360-degree view of all the costs that go into a project, minimizing the chance of incorrect estimates, wasted time and loss of revenue. Track manufacturing costs based on bill of materials and actual operations.

Invoicing

All your accounting and financial information is in one spot, drastically reducing the time it takes to close your books each month and speeding your order-to-cash cycle.

Customer insight

Empower your support team with a total view of the customer experience. You'll know if customers order once but never return, if products were returned as damaged or flawed, if a customer had complaints or unresolved issues, etc.

Real-time dashboards

View dashboards with drilldown capabilities. User-friendly, visual dashboards provide employees — from shop floor to back office — with easy access to the information you need them to see. Team members can instantly view key metrics that lead to better decisions, better processes and greater productivity.
